

TAILSPIN CIVIC SYSTEMS, INC. — SECURITY CONTROLS TRACEABILITY MATRIX (SCTM)

AwardWorks Platform (SaaS) | FedRAMP Moderate Baseline | NIST SP 800-53 Rev. 5 | Sample GRC portfolio artifact — fictional company

Control ID	Control Family	Control Name	Baseline	Implementation Status	Control Origination	Implementation Summary	Assessment Method	Assessment Result	Related POA&M ID
AC-2	Access Control	Account Management	Moderate	Implemented	Service Provider Corporate	Accounts provisioned via Okta tied to HRIS events; privileged accounts require manager + system owner approval; automated disable at 35 days inactivity.	Examine, Interview	Satisfied	
AC-2(1)	Access Control	Automated System Account Management	Moderate	Implemented	Service Provider Corporate	Okta Lifecycle Management automates provisioning/deprovisioning; API-driven, no manual account creation in production.	Examine, Test	Satisfied	
AC-6(9)	Access Control	Log Use of Privileged Functions	Moderate	Partially Implemented	Service Provider System-Specific	Privileged actions logged in CloudTrail and forwarded to SIEM; logging coverage gap identified on legacy reporting subsystem.	Examine, Test	Other Than Satisfied	V-003
AC-17	Access Control	Remote Access	Moderate	Implemented	Service Provider Corporate	All remote administrative access requires MFA and traverses a bastion host with session recording; direct SSH from internet is blocked by SCP.	Examine, Test	Satisfied	
AU-2	Audit and Accountability	Event Logging	Moderate	Implemented	Service Provider System-Specific	Auditable event list documented and approved; covers authentication, authorization, data access, configuration change, and privilege escalation events.	Examine, Interview	Satisfied	
AU-6	Audit and Accountability	Audit Record Review, Analysis, and Reporting	Moderate	Partially Implemented	Service Provider System-Specific	SIEM correlation rules deployed; documented weekly review procedure exists but review evidence was inconsistent for a two-month period.	Examine, Interview	Other Than Satisfied	V-005
AU-11	Audit and Accountability	Audit Record Retention	Moderate	Implemented	Service Provider System-Specific	Audit records retained online for 90 days and in S3 Glacier for 12 months, meeting FedRAMP retention requirements.	Examine	Satisfied	
CA-7	Assessment, Authorization, and Monitoring	Continuous Monitoring	Moderate	Partially Implemented	Service Provider System-Specific	ConMon program documented with monthly vulnerability scanning and reporting; monthly deliverable submitted late in two of the last six cycles.	Examine, Interview	Other Than Satisfied	V-007
CM-2	Configuration Management	Baseline Configuration	Moderate	Implemented	Service Provider System-Specific	Infrastructure defined as code (Terraform); AMIs hardened to CIS Level 1 benchmark and version-controlled.	Examine, Test	Satisfied	
CM-6	Configuration Management	Configuration Settings	Moderate	Partially Implemented	Service Provider System-Specific	CIS benchmark applied to compute baseline; drift detected on three application servers during assessment sampling.	Test	Other Than Satisfied	V-002
CM-7	Configuration Management	Least Functionality	Moderate	Implemented	Service Provider System-Specific	Container images built from minimal base images; unnecessary services and ports disabled by default and enforced via admission controller.	Examine, Test	Satisfied	
CP-9	Contingency Planning	System Backup	Moderate	Implemented	Service Provider System-Specific	Automated encrypted backups: database PITR (5-min RPO) plus daily full snapshots replicated cross-region.	Examine, Test	Satisfied	
CP-10	Contingency Planning	System Recovery and Reconstitution	Moderate	Partially Implemented	Service Provider System-Specific	Recovery procedures documented; full-system recovery has not been exercised within the required annual period.	Examine, Interview	Other Than Satisfied	V-004
IA-2(1)	Identification and Authentication	MFA to Privileged Accounts	Moderate	Implemented	Service Provider Corporate	Phishing-resistant MFA (FIDO2/WebAuthn) enforced for all privileged accounts via Okta policy.	Examine, Test	Satisfied	
IA-5	Identification and Authentication	Authenticator Management	Moderate	Implemented	Service Provider Corporate	Password policy aligned to NIST SP 800-63B; no forced periodic rotation, breached-password screening enabled.	Examine, Test	Satisfied	
IR-4	Incident Response	Incident Handling	Moderate	Implemented	Service Provider Corporate	Documented IR plan with defined severity tiers; 24x7 on-call rotation; US-CERT reporting procedure defined per FedRAMP requirements.	Examine, Interview	Satisfied	
IR-6	Incident Response	Incident Reporting	Moderate	Partially Implemented	Service Provider Corporate	Internal reporting path defined; the one-hour US-CERT/FedRAMP ISSO notification requirement is documented but has not been exercised in a tabletop.	Examine, Interview	Other Than Satisfied	V-006
RA-5	Risk Assessment	Vulnerability Monitoring and Scanning	Moderate	Partially Implemented	Service Provider System-Specific	Authenticated scanning performed monthly on infrastructure, OS, web, and database layers; several High findings exceeded the 30-day FedRAMP remediation window.	Examine, Test	Other Than Satisfied	V-001
SA-11	System and Services Acquisition	Developer Testing and Evaluation	Moderate	Implemented	Service Provider Corporate	SAST and dependency scanning enforced in CI; annual third-party penetration test performed with findings tracked to closure.	Examine	Satisfied	
SC-7	System and Communications Protection	Boundary Protection	Moderate	Implemented	Service Provider System-Specific	Authorization boundary enforced via VPC segmentation, security groups, WAF, and a deny-by-default egress policy; managed interfaces documented in the SSP.	Examine, Test	Satisfied	
SC-8	System and Communications Protection	Transmission Confidentiality and Integrity	Moderate	Implemented	Service Provider System-Specific	TLS 1.2+ with FIPS 140-3 validated cryptographic modules enforced on all external and internal service-to-service communication.	Examine, Test	Satisfied	

Control ID	Control Family	Control Name	Baseline	Implementation Status	Control Origination	Implementation Summary	Assessment Method	Assessment Result	Related POA&M ID
SC-13	System and Communications Protection	Cryptographic Protection	Moderate	Implemented	Service Provider System-Specific	FIPS 140-3 validated modules used for all cryptographic operations; AWS KMS FIPS endpoints in use.	Examine	Satisfied	
SC-28	System and Communications Protection	Protection of Information at Rest	Moderate	Implemented	Service Provider System-Specific	All data stores encrypted at rest with AES-256 via customer-managed KMS keys with annual rotation.	Examine, Test	Satisfied	
SI-2	System and Information Integrity	Flaw Remediation	Moderate	Partially Implemented	Service Provider System-Specific	Patching automated for OS/container layers; remediation SLA missed for a subset of High-severity findings (see RA-5).	Examine, Test	Other Than Satisfied	V-001
SI-4	System and Information Integrity	System Monitoring	Moderate	Implemented	Service Provider System-Specific	IDS/IPS via GuardDuty, host-based monitoring, and file integrity monitoring feeding the SIEM with 24x7 alerting.	Examine, Test	Satisfied	
PS-3	Personnel Security	Personnel Screening	Moderate	Implemented	Service Provider Corporate	Background investigations completed for all personnel with system access prior to provisioning; re-screening every five years.	Examine, Interview	Satisfied	
AT-2	Awareness and Training	Literacy Training and Awareness	Moderate	Implemented	Service Provider Corporate	Annual security awareness training with role-based modules for privileged users; completion tracked at 100% for in-scope personnel.	Examine	Satisfied	
MP-6	Media Protection	Media Sanitization	Moderate	Inherited	Inherited from AWS (FedRAMP High P-ATO)	Media sanitization is inherited from the underlying IaaS provider; customer responsibility limited to logical data deletion.	Examine	Satisfied	
PE-3	Physical and Environmental Protection	Physical Access Control	Moderate	Inherited	Inherited from AWS (FedRAMP High P-ATO)	Physical access to data centers is fully inherited from the underlying IaaS provider's authorized environment.	Examine	Satisfied	
PL-2	Planning	System Security and Privacy Plans	Moderate	Implemented	Service Provider System-Specific	This SSP documents the authorization boundary, control implementations, and system environment; reviewed and updated at least annually.	Examine	Satisfied	

CONTROL IMPLEMENTATION SUMMARY

Counts derived from the SCTM tab. Full FedRAMP Moderate baseline is 32

Implementation Status	Count	% of Sampled Controls
Implemented	20	66.7%
Partially Implemented	8	26.7%
Inherited	2	6.7%
Planned	0	0.0%
Not Applicable	0	0.0%
TOTAL	30	

Assessment Result

Result	Count	% of Sampled Controls
Satisfied	22	73.3%
Other Than Satisfied	8	26.7%

SCTM — LEGEND & METHODOLOGY

Purpose	The Security Controls Traceability Matrix documents how each NIST SP 800-53 Rev. 5 control in the FedRAMP Moderate baseline is implemented, who is responsible for it, how it was assessed, and whether it passed.
Implementation Status	Implemented Partially Implemented Planned Alternative Implementation Not Applicable Inherited (from an underlying authorized service provider)
Control Origination	Service Provider Corporate (org-wide control) Service Provider System-Specific (unique to this system) Inherited Customer (Configured/Provided) Shared
Assessment Methods	Examine (documentation/artifacts), Interview (personnel), Test (technical validation) — per NIST SP 800-53A
Assessment Result	Satisfied = control operating as designed Other Than Satisfied = deficiency identified, which generates a POA&M item Every 'Other Than Satisfied' control links to a POA&M ID in the Related POA&M ID column, so a reviewer can trace a control deficiency straight to its remediation plan and due date.
Traceability	
Scope note	This sample documents 30 representative controls across 15 families. A production FedRAMP Moderate SSP addresses all 323 controls and enhancements.
